

Case Study Chasing Counts

Start Tracking...
Let's Go!

What is DSABuddy ?

Online platform for users to track their progress, build streaks, and compete with classmates, all in one dashboard

We built DSABuddy for the way college DSA actually works

Industry : Productivity Tracking Tool

Track # Compete # Improve

[Deployed Link](#)

Objective

As a Product Manager, you need to propose a solution that helps developers avoid scattered practice across platforms

What is DSA Practice ?

A continuous skill-building journey where learners build problem-solving ability, track what they've covered, and prepare to perform under interview pressure.

*What to solve next?
Am I improving?
Where am I stand?*

Importance of Tracking ?

Tracking progress helps you identify topics that need more practice. It also keeps you motivated by showing consistent improvement .

Better Tracking
↓
More Consistent Practice
↓
Higher Retention

What Product Outcomes should we focus on?

Product Outcomes

- Number of Platforms connected per User.
- Percentage of users returning after first login

Current Tracking Ways

Manually logging solved problems topic-wise

Browser Extensions that let users increment problem counts per topic with manual clicks

Static problem lists (Blind 75, NeetCode 150, Striver's A2Z) followed manually

How is competition solving for DSA Tracking ?

LeetTrack

Profile analytics, streak tracking, and customizable dashboard widgets pulled from your LeetCode profile

DSA Grinders

Leaderboards and competitive tracking with friends, with notifications drive accountability

Codolio

Aggregates progress across many platforms into one shareable portfolio link, lags company wise questions & hiring insights

What else do people use to track?

Single platform tools

Manual logs

GitHub based

Community

Target segment to solve for DSA Tracking ?

All DSA Practicers

Professionals

They often skip this since they already know what they're targeting

Students

Beginners

They usually begin with one platform that can be tracked easily

Targeted Prep

Why choose them?

- **Big opportunity to tackle**

They face the most fragmented prep journey, juggling DSA sheets, multiple platforms, and scattered company-wise interview data. Solving this directly improves their placement outcomes.

- **Largest & Most active segment**

Final year students form the largest, most habitual practice cohort, they practice daily during placement season, making them the highest-engagement segment

Major Problems they are facing?

Hypothesis

- Progress is scattered across different platforms with no single view
- No way to see company-specific prep status
- Interview experiences and placement data on separate sites (GFG, PrepInsta, IndiaBix) disconnected from actual practice tracking
- Manual logging tools is time consuming and irritating.

How students feel while preparing for tech placements ?

Saransh

Primary Persona Discliplined Prepper

"I don't want to grind blindly , I want to know exactly where I stand."

Organized

Goal Driven

Pain Points

- Logs progress across platforms , wastes time tracking
- Hard to tell if he's "interview-ready" for a company without checking multiple sources
- Too many tabs open (tracker sheet, company prep sheet, etc) context-switching kills focus

Goals

- One dashboard showing real progress across every platform he practices on
- See exactly which topics he's weak in & practice company wise
- Stay consistent without manually logging every solve

Bhoomi

Secondary Persona Inconsistent Prepper

"I start strong, then life happens and I lose track of where I left off."

Easy-Going

Inconsistent

Pain Points

- Missing a few days feels like she's "ruined" her progress and restarts from scratch
- Doesn't know what already covered, so she re-solves the same easy problems for reassurance instead of progressing
- Doesn't follow company specific prep practices randomly without a target

Goals

- A low-effort way to see progress without hustle
- Something that makes missing a day feel recoverable instead of like starting over
- Gentle nudges back on track rather than guilt-driven grinding

Saransh's DSA Tracking Journey

Phase	Sign up	Connect Accounts	Track Progress	Pick Target Company	Prepare & Revise
Activities	Creates account, with email or google authentication. Select username, branch & graduation year and proceed	Connect different profiles (LeetCode, GFG, Codechef, Codeforces, HackerRank) in easy steps	Views unified dashboard of solved problems, cross platform ratings, topics, streaks, leaderboards, progress report	Browses company-wise question banks, OA Platforms, Process CTC & criteria data	Reads interview experiences, revises weak topics, stay consistent, master algorithms & crack interview
Emotions	 Motivated & hopeful	 Mild friction	 Happy & Relieved	 Slightly overwhelmed	 confident & focused
Thoughts	"Finally, one place to track everything"	"Hope this actually syncs correctly"	"Finally one view"	"Now I have company wise question bank too"	"I know exactly what to revise before the test"

User Journey is not actually linear while preparing but pain points remain same

What does seem like the TRUE PROBLEM? ✨

Students preparing for tech placements struggle to know if they're actually interview-ready

- Why** Their practice is scattered across 3-5+ disconnected platforms with no unified view
- Why** They track how much they've practiced, but not whether it matches with target company
- Why** No existing tool combines cross-platform tracking + company-specific question banks + interview experiences in one place

Why do they even need this?

- Want to know exactly where they stand before a test
- Want to know if they're ready for a specific company
- Don't want to discover gaps during the actual interview

Is this a real problem?

User Survey

52% people struggle to create an itinerary
60% people find it difficult to get on the same page with the group
People have to currently use 7+ application to plan their trips which is resulting into collaboration issues

Secondary Research

- 52% Tracking progress across multiple platforms
- 61% Not knowing if they're ready for a specific company

Technologies & Tools Used ?

Impact vs Effort Matrix

01 - PROGRESS

Unified DSA Progress

Track all problems solved across LeetCode, Codeforces, and CodeChef inside a single dashboard.

04 - AUTOMATION

Auto-Sync Engine

Set and forget. Background workers fetch your submissions every hour.

14:00	LeetCode	+3 problems
14:01	Codeforces	+1 problem
15:00	CodeChef	● scanning...

06 - INSIGHTS

Placement Insights

Explore campus recruitment histories, compensation details, and academic eligibility criteria.

COMPANY	CTC	CRITERIA
Google	32.5 LPA	CGPA > 8.0
Microsoft	51.0 LPA	0 Backlogs
Amazon	45.0 LPA	B.Tech / MCA
Goldman Sachs	24.0 LPA	CGPA > 7.5

02 - COMPETE

College Leaderboards

Compete directly with peers. Filter by branch or graduation year.

RANK	NAME	SCORE
#1	Tanmay G.	4,850
#2	Rohan S.	4,210
#3	Priya P.	3,980
#4	Aman K.	3,740

03 - CONSISTENCY

Streak System

Build daily coding habits. Streaks auto-update across all platforms.

05 - RESOURCES

From Zero to Offer ↗

Curated placement guide from DSA basics to top tech offers.

01	Arrays & Hashing	✓
02	Trees & Graphs	✓
03	Dynamic Programming	
04	System Design	
05	Mock Interviews	

07 - COMMUNITY

Interview Experience Forum

Share and discuss real interview experiences, questions asked, and tips from peers.

Google SDE Intern 2025: Interview Experience

Onboarding

Features

How will the high-level look for this solution?

What can go wrong ?

These platforms don't offer official public APIs, sync relies on scraping that can break without notice

Build a manual log fallback so users can track progress even when auto-sync breaks, and monitor API health with alerts.

New users landing on an empty experience feed conclude the product is incomplete

Seed the feed with curated, anonymized experiences from early users, and add low-friction posting templates so contributing takes less time.

How will we measure success of the solution?

Type	Metrics	Why?
North Star	Daily Active Users	Primary business outcome, measures whether DSABuddy is becoming a daily prep habit
L1 Metrics	No. of platforms connected per user	Primary lever driving DAU, users who connect more platforms have more reason to return daily
L2 Metrics	% of users connecting at least one platform within 24hrs of signup	Measures whether onboarding delivers first value moment before users drop off
Adoption	% of users actively viewing company-wise question banks	Measures whether the core differentiator is actually being used, not just the tracker
Engagement	% of users returning more than 3 days per week	Measures whether it is becoming a daily prep. habit vs a one-time curiosity visit
Guardrail	% of users who connect accounts but never return after first login	If users connect once and disappear, the tracker isn't delivering enough perceived value to pull them back
System	Platform sync response time & data freshness lag	Users lose trust immediately if their LeetCode solve count is wrong

DSABuddy - Scattered Practice to Structured Tracking
